Sixteenth session
First Committee
Agenda item 93
Role of science and technology in the context of international security and disarmament

Bangladesh, Bhutan, Burkina Faso, Congo, Cuba, Democratic People’s Republic of Korea, Dominican Republic, Fiji, Haiti, India, Indonesia, Iran (Islamic Republic of), Jordan, Kenya, Libyan Arab Jamahiriya, Madagascar, Mauritius, Namibia, Nepal, Pakistan, Peru, Singapore, Sri Lanka, Viet Nam and Zambia: draft resolution

Role of science and technology in the context of international security and disarmament

The General Assembly,

Recognizing that scientific and technological developments can have both civilian and military applications and that progress in science and technology for civilian applications needs to be maintained and encouraged,

Convinced that military applications of scientific and technological developments can contribute significantly to the improvement and upgrading of advanced weapons systems and, in particular, weapons of mass destruction,

Aware of the need to follow closely the scientific and technological developments that may have a negative impact on international security and disarmament, and to channel scientific and technological developments for beneficial purposes,

Cognizant that international transfers of dual-use as well as high-technology products, services and know-how for peaceful purposes are important for the economic and social development of States,

Also cognizant of the need to regulate such transfers of dual-use goods and technologies and high technology with military applications through multilaterally negotiated, universally applicable, non-discriminatory guidelines,

Expressing its concern about the growing proliferation of ad hoc and exclusive export control regimes and arrangements for dual-use goods and technologies, which tend to impede the economic and social development of developing countries,
Recalling that in the Final Document of the Thirteenth Conference of Heads of State or Government of Non-Aligned Countries, held in Kuala Lumpur from 20 to 25 February 2003,¹ it was again noted with concern that undue restrictions on exports to developing countries of material, equipment and technology for peaceful purposes persisted.

Emphasising that internationally negotiated guidelines for the transfer of high technology with military applications should take into account the legitimate defence requirements of all States and the requirements for the maintenance of international peace and security, while ensuring that access to high-technology products and services and know-how for peaceful purposes is not denied,

1. **Affirms** that scientific and technological progress should be used for the benefit of all mankind to promote the sustainable economic and social development of all States and to safeguard international security, and that international co-operation in the use of science and technology through the transfer and exchange of technological know-how for peaceful purposes should be promoted;

2. **Invites** Member States to undertake additional efforts to apply science and technology for disarmament-related purposes and to make disarmament-related technologies available to interested States;

3. **Urges** Member States to undertake multilateral negotiations with the participation of all interested States in order to establish universally acceptable, non-discriminatory guidelines for international transfers of dual-use goods and technologies and high technology with military applications;

4. **Encourages** United Nations bodies to contribute, within existing mandates, to promoting the application of science and technology for peaceful purposes;

5. **Decides** to include in the provisional agenda of its sixty-first session the item entitled "Role of science and technology in the context of international security and disarmament."
