Nuclear disarmament

Working paper submitted by the Islamic Republic of Iran

1. This paper contains the main views of the Islamic Republic of Iran in regard to nuclear disarmament. It outlines the global measures towards nuclear disarmament during the past 70 years, assesses the achievements and identifies the challenges related to the implementation of obligations under article VI of the Treaty on the Non-Proliferation of Nuclear Weapons and the unequivocal undertakings, by the nuclear-weapon States, to accomplish the total elimination of their nuclear arsenals leading to nuclear disarmament. It also includes a set of recommendations to the 2015 Review Conference of the Parties to the Treaty on the Non-Proliferation of Nuclear Weapons, on the way forward to achieve the objective of a nuclear-weapon-free world.

I) Nuclear Disarmament: A 70-Year Old Strong Global Demand

2. The unspeakable death and destruction caused by the horrible nuclear attacks to Hiroshima and Nagasaki in 1945 proved that nuclear weapons, as the most horrendous weapons, are unique in their destructive power, in the unspeakable human
suffering they cause, in the impossibility of controlling their effects in time and space, and in the threat they pose to the environment, to future generations, and indeed to the survival of humanity; thus, the only absolute guarantee against the use or threat of use of nuclear weapons is their total elimination and assuring that they will never be produced again. Since then, nuclear disarmament and the total elimination of nuclear weapons has always been the highest global priority in the context of disarmament and arms control, which continues to be supported by the overwhelming majority of the world nations. Hence, it is a 70-year old global demand which was pursued at the regular and special sessions of the United Nations General Assembly, multilateral disarmament machinery, trans-regional, regional and sub-regional organizations and fora, as well as through establishing nuclear-weapon-free zones, and the efforts and initiatives of academia, parliamentarians, non-governmental organizations and the civil society. With no doubt, the advisory opinion of 8 July 1996 of the International Court of Justice, on the legality of the threat or use of nuclear weapons, is of outmost importance in highlighting the legal obligation of the nuclear-weapon States on nuclear disarmament. This was recently complemented by the worldwide attention to the humanitarian impact of nuclear weapons. More importantly, nuclear disarmament has been the main purpose of the Treaty, which was followed both in its negotiation process and Review Conferences of its parties.

3. On 24 January 1946, the very first resolution of the first session of the General Assembly - as the primary policymaking and representative body of the United Nations composed of representatives of all Member States - unanimously called for the total
elimination of nuclear weapons. During the past 70 years, the Assembly, by adopting well over hundreds of resolutions, continued to stress the urgent need for the intensified global efforts to rid the world from the scourge of these inhumane weapons through their total elimination.

4. The *first special session of the General Assembly devoted to disarmament*, in 1978, was indeed a turning point in promoting the international disarmament agenda and machinery. Through the Final Document of that session, the Assembly acknowledged that “nuclear weapons pose the greatest danger to mankind and to the survival of civilization”, since the “existing arsenals of nuclear weapons alone are more than sufficient to destroy all life on earth.” While referring to the mankind’s only choices: to “proceed to disarmament or face annihilation”, the Assembly identified removing such threat as “the most acute and urgent task”. It therefore, called for the effective measures aimed at “nuclear disarmament and the complete elimination of nuclear weapons” as the highest priority. At the same time, in several occasions, the Assembly underlined that the nuclear-weapon States, in particular those among them which possess the most important nuclear arsenals, “have the primary responsibility for nuclear disarmament”. In this context, the Assembly also identified “the ‘political will’ of States, especially of those possessing nuclear weapons” as “the decisive factor for achieving real measures of disarmament”.

5. In another important occasion, i.e. the *first ever high-level meeting of the General Assembly on nuclear disarmament*, on 26 September 2013, the Assembly, while underlining the strong support, expressed at that meeting, “for taking urgent and
effective measures to achieve the total elimination of nuclear weapons”, called “for urgent compliance with the legal obligations and the fulfilment of the commitments undertaken on nuclear disarmament”. Moreover, by endorsing “the wide support expressed at the high-level meeting for a comprehensive convention on nuclear weapons”, General Assembly called “for the urgent commencement of negotiations in the Conference on Disarmament for the early conclusion of a comprehensive convention on nuclear weapons to prohibit their possession, development, production, acquisition, testing, stockpiling, transfer, use or threat of use and to provide for their destruction”. Additionally, the Assembly designated “26 September as the International Day for the Total Elimination of Nuclear Weapons devoted to furthering this objective, including through enhancing public awareness and education about the threat posed to humanity by nuclear weapons and the necessity for their total elimination, in order to mobilize international efforts towards achieving the common goal of a nuclear-weapon-free world”, and also decided “to convene, no later than 2018, a United Nations high-level international conference on nuclear disarmament to review the progress made in this regard”, which, in fact, would provide the international community of States with a valuable opportunity to advance nuclear disarmament.

6. Parallel to the efforts of the General Assembly, intense efforts on nuclear disarmament continued since the establishment of the multilateral disarmament machinery, i.e. the Conference on Disarmament, the United Nations Disarmament Commission and the First Committee of the General Assembly, through which many
proposals were made on how to eliminate these inhumane weapons entirely and what interim steps and long term measures are required to achieve this objective.

7. In addition, the endeavours aimed at nuclear disarmament by the trans-regional, regional and sub-regional organizations and fora, such as those of the Non-Aligned Movement and the African Union should be highlighted. For instance, the Heads of State or Government of the Non-Aligned Movement in the Final Document of the 16th Summit of the Movement, held in Tehran, the Islamic Republic of Iran, on 26 - 31 August 2012, “stressed their concern at the threat to humanity posed by the continued existence of nuclear weapons and of their possible use or threat of use” and “reaffirmed the Movement’s principled position on nuclear disarmament, which remains its highest priority”. They also “reiterated deep concern over the slow pace of progress towards nuclear disarmament and the lack of progress by the nuclear-weapon States to accomplish the total elimination of their nuclear arsenals in accordance with their relevant multilateral legal obligations”. The Movement also took the initiative of convening the first ever high-level meeting of the General Assembly on nuclear disarmament, on 26 September 2013, during which, President Rouhani of the Islamic Republic of Iran, presented, on behalf of 120 States members of the Non-Aligned Movement, a three-point proposal on nuclear disarmament (as explained in paragraph 5 above). The proposal was supported by many of the representatives of the political and geographical groups, the Member States and the civil society participating in that meeting and was subsequently adopted by the General Assembly in its resolutions
68/32 and 69/58 on the follow-up to the 2013 high-level meeting of the Assembly on nuclear disarmament.

8. Equally important is the valuable measures at the regional level to establish nuclear-weapon-free zones, including in Latin America, Africa and different parts of Asia, which led to the absence of nuclear weapons in the respective territories of States parties to the treaties establishing such zones. Likewise, the efforts and initiatives of academia, parliamentarians, non-governmental organizations and the civil society in enhancing public awareness and education about the threat posed to humanity by nuclear weapons and the necessity for their total elimination, should never be underestimated.

9. The role of the advisory opinion of 8 July 1996 of the International Court of Justice on the legality of the threat or use of nuclear weapons also should be highlighted, through which, the Court unanimously concluded that “there exists an obligation to pursue in good faith and bring to a conclusion negotiations leading to nuclear disarmament in all its aspects under strict and effective international control”. Since then, the United Nations General Assembly, through its resolutions on the subject, has persistently called upon “all States immediately to fulfil that obligation by commencing multilateral negotiations leading to an early conclusion of a nuclear weapons convention prohibiting the development, production, testing, deployment, stockpiling, transfer, threat or use of nuclear weapons and providing for their elimination”.

10. The recent worldwide attention to the humanitarian impact of nuclear weapons, manifested in the active participation of States and civil society at the three conferences on the subject, held in 2013 in Norway, in February 2014 in Mexico, and in December 2014 in Austria, respectively, enhances and complements the unanimous conclusion of the International Court of Justice that “there is in neither customary nor conventional international law any specific authorization of the threat or use of nuclear weapons” and the acknowledgement of the General Assembly, in its various resolutions, “that any use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity”. These conferences provide the international community of States with a new forum to underline the catastrophic humanitarian, environmental and developmental impacts of a possible nuclear weapon detonation, and thereby underscore the urgency and the essentiality of the need to nuclear disarmament.

11. The application of 25 April 2014 of the Republic of the Marshall Islands before the International Court of Justice against nuclear-weapon possessors on the Obligations concerning Negotiations relating to Cessation of the Nuclear Arms Race and to Nuclear Disarmament should also be recalled as a new development in the context of the international efforts to achieve nuclear disarmament. This application, by accusing the nuclear-weapon possessors of not fulfilling their obligations with respect to the cessation of the nuclear arms race at an early date and to nuclear disarmament - in particular through contending that “by not actively pursuing negotiations in good faith on effective measures relating to cessation of the nuclear
arms race at an early date and to nuclear disarmament”, the concerned States parties to
the non-proliferation Treaty have “breached” and continue to breach their “legal duty”
to perform their “obligations under the [Treaty] and customary international law in
good faith” – requests the Court to order them “to take all steps necessary to comply
with” their “obligations under Article VI of the NPT and under customary international
law within one year of the Judgment, including the pursuit, by initiation if necessary,
of negotiations in good faith aimed at the conclusion of a convention on nuclear
disarmament in all its aspects under strict and effective international control”. As it has
been said, this unprecedented application which “challenges the very legitimacy and
legality of nuclear weapons possession” and rejects the view that there are legitimately
held nuclear weapons, is one of the indicatives of the existing attitudes and perceptions
on the need for the total elimination of nuclear weapons, and can “foster international
public support for more concrete efforts towards nuclear disarmament”.

12. Nevertheless, negotiating history and the text and context of the Treaty on the
Non-Proliferation of Nuclear Weapons as well as the content of the outcome
documents of its Review Conferences confirm that one of the most - if not the most-
important efforts towards nuclear disarmament has been made within the framework of
this universal legally binding instrument. As clearly stated by the non-nuclear-weapon
States before and during the negotiations leading to the conclusion of this Treaty,
nuclear disarmament was the main incentive and objective. They considered the Treaty
“not an end in itself, but only a means to an end” that is “the achievement of nuclear
disarmament”. It was based on this fundamental assumption that non-proliferation of
nuclear weapons, however positive it may be, derives its legitimacy from the larger objective of nuclear disarmament.

13. Subsequently, the parties to the Treaty declared, in its preamble, “their intention to achieve at the earliest possible date the cessation of the nuclear arms race and to undertake effective measures in the direction of nuclear disarmament” and urged “the co-operation of all States in the attainment of this objective”. Moreover, through its article VI, each of the Parties to the Treaty undertook “to pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date and to nuclear disarmament”. Additionally, the non-nuclear-weapon States parties to the Treaty, ratified it based on this essential assumption and fundamental agreement that the implementation of the Treaty would and should lead to a nuclear-weapon-free world. Definitely, they never intended to become party to a Treaty that divides States to the nuclear-weapon-haves and the nuclear-weapon-have-nots and legitimizes the indefinite possession of such inhumane and dangerous weapons by certain powers. The purpose of the Treaty is not about only preventing non-nuclear-weapons States from acquiring nuclear weapons, it is also about an inherently linked objective to this goal, that is disarming nuclear-weapon States. The Treaty is about the elimination of all nuclear weapons which is the only absolute grantees against their scourge. The main purpose of the Treaty is that no one should have nuclear weapons. It is aimed at a nuclear-weapon-free world.

14. Demands for full and immediate fulfilment of the obligations on nuclear disarmament under the Treaty continued in its Review Conferences, prominent among
them were the 1995, 2000 and 2010 Review Conferences that made specific decisions regarding nuclear disarmament. The 1995 Review and Extension Conference, in its decision 2 on principles and objectives for nuclear non-proliferation and disarmament, concluded that “the undertakings with regard to nuclear disarmament as set out in the Treaty on the Non-Proliferation of Nuclear Weapons should thus be fulfilled with determination. In this regard, the nuclear-weapon States reaffirm[ed] their commitment, as stated in article VI, to pursue in good faith negotiations on effective measures relating to nuclear disarmament.” Moreover, the Conference highlighted the importance of “determined pursuit by the nuclear-weapon States of systematic and progressive efforts to reduce nuclear weapons globally, with the ultimate goals of eliminating those weapons”. Afterwards, the 2000 Review Conference agreed on the 13 practical steps for the systematic and progressive efforts to implement Article VI of the Treaty on the Non-Proliferation of Nuclear Weapons and paragraphs 3 and 4 (c) of the 1995 Decision on Principles and Objectives for Nuclear Non-Proliferation and Disarmament which includes “an unequivocal undertaking by the nuclear-weapon states to accomplish the total elimination of their nuclear arsenals leading to nuclear disarmament to which all States Parties are committed under Article VI”.

15. Additionally, “in pursuit of the full, effective and urgent implementation of article VI of the Treaty” and building upon the aforesaid decisions, as well as reaffirming “the continued validity of the practical steps agreed to in the Final Document of the 2000 Review Conference”, the 2010 Review Conference of the Treaty, through its conclusions and recommendations for follow-on actions, agreed on
a 22-point *action plan on nuclear disarmament* which includes concrete steps for the total elimination of nuclear weapons. Through this action plan, “the Conference reaffirms the unequivocal undertaking of the nuclear-weapon States to accomplish the total elimination of their nuclear arsenals leading to nuclear disarmament”, “reaffirms the urgent need for the nuclear-weapon States to implement the steps leading to nuclear disarmament agreed to in the Final Document of the 2000 Review Conference”, “affirms the need for the nuclear-weapon States to reduce and eliminate all types of their nuclear weapons”, and “reaffirms and recognizes that the total elimination of nuclear weapons is the only absolute guarantee against the use or threat of use of nuclear weapons”. Likewise, by virtue of this action plan, “the nuclear-weapon States commit to undertake further efforts to reduce and ultimately eliminate all types of nuclear weapons”. The Conference also decided to consider, during the 2015 Review Conference, “the next steps for the full implementation of article VI”.

**II) Nuclear Disarmament: 45-Year Old Unfulfilled Obligations and Commitments**

16. Now, the point is that, what do the above facts and other facts and figures tell us? What is our assessment about the fulfilled and unfulfilled obligations and commitments on nuclear disarmament? In other words, where do we stand now in terms of the number and destructive power of nuclear weapons worldwide? Is our present world more secure or more dangerous than that of the past? And, what are the challenges in the face of a real progress for the establishment of a nuclear-weapon-free world to secure the present and upcoming generations and our planet against the horrendous threat of nuclear weapons?
17. The aforesaid facts and other figures and facts and realities in the context of nuclear disarmament related issues suggest the following:

a) During the past 70 years, not only the demand for nuclear disarmament and the total elimination of nuclear weapons was not declined, but, quite the opposite – inter alia, as a result of the qualitative and quantitative improvement of such weapons by the nuclear-weapon States, which at some points, were enough even to effectively end all human life on the planet several times over – has severely been heightened. The recent intensified international efforts, represented, in part, in the first ever high-level meeting of the General Assembly on nuclear disarmament, on 26 September 2013, and the three conferences on the humanitarian impact of nuclear weapons, in 2013 and 2014, suggest that this demand continues to be pursued with determination and strong resolve.

b) The active participation of States and civil society at the three conferences on the humanitarian impact of nuclear weapons, is a clear symbol of worldwide attention to the need for the total elimination of nuclear weapons, and suggests that the present generation is not deceived by such arguments that: as we experienced seven decade record of non-use of nuclear weapons, it’s unlikely that they will ever be used again. On the contrary, today, the peoples of the world believe that our planet still is heavily booby-trapped with thousands of nuclear warheads and unless they are eliminated completely, they will almost certainly be used again, either intentionally or by accident, and in either case the
consequences will be catastrophic, since the existing nuclear weapons have
destructive power enough to transform the Earth into a dead planet. Tens of
mishaps that might have started accidental nuclear war and other nuclear-
weapon accidents – that resulted in loss of a number of such weapons, a few of
them still left in oceans floor out of any control, and sooner or later, their
poisonous material would leak to this common heritage of mankind - many of
which remain unknown to the public, confirm this assessment.

c) The adoption of the Comprehensive Nuclear-Test-Ban Treaty was indeed a
right step in the right direction. However, refraining by certain nuclear-weapon
States of its ratification to allow it enter into force after almost 20 years of its
adoption, and more importantly, the efforts of nuclear-weapon States in
modernizing their nuclear weapons and developing new types of such weapons,
including through conducting nuclear-weapon tests in alternative ways - that
clearly contradicts the object and purpose of this Treaty – are other sources of
grave concern in regard to nuclear disarmament. In this context, one should
recall the 2014 application before the International Court of Justice, on the
\textit{Obligations concerning Negotiations relating to Cessation of the Nuclear Arms
Race and to Nuclear Disarmament}, by the Republic of the Marshall Islands; a
country that continues to suffer from 67 nuclear weapons detonated over the
Islands from 1946 – 1958, one of which was \textit{Castle Bravo} that was about 1,000
times more powerful than each of the atomic bombs which were dropped on
Hiroshima and Nagasaki. The long-lasting effects of such detonations on the
islands and its people prove that how devastating and uncontrollable is the effects of nuclear-weapons detonation on the environment and the human life, even the generations yet unborn, and how urgent is the need for the total elimination of such weapons.

d) The increase in the number of States parties to the non-proliferation Treaty which now, after the Charter of the United Nations and the 1949 Geneva Conventions, has the most parties of any treaty in existence, is of course a great achievement. However, its failure in gaining the universal characteristic remains a serious challenge to its effectiveness. As “zero” is called as “the only safe number of nuclear weapons on the planet”, without doubt, “zero is the only acceptable number of countries outside the non-proliferation Treaty”. Only this can ensure the effectiveness of this fundamental instrument.

e) There exists a 45-year old explicit legal obligation to achieve nuclear disarmament leading to the total elimination of all nuclear weapons, and certain required decisions made and agreements reached within the context of the Review Conferences of the Treaty to make progress on their implementation. Adoption of the 13 practical steps for the systematic and progressive efforts to implement Article VI of the Treaty by the 2000 Review Conference and a 22-point action plan on nuclear disarmament by the 2010 Review Conference are among such decisions.
f) Even though the *incomplete, selective and discriminatory implementation of the Treaty* provisions is considered one of its challenges that needs to be effectively addressed, its main implementation challenge, however, is the *lack of real progress in the fulfilment of nuclear disarmament obligations under article VI of the Treaty*, by all the nuclear-weapon States, and the breach, by certain nuclear-weapon States, of their nuclear non-proliferation obligations under articles I and III of the Treaty, represented, inter alia, in their nuclear-weapon-sharing policies and their direct or indirect assistance to countries outside the Treaty to develop nuclear weapons or other nuclear explosive devices.

g) It cannot be denied that the adoption of the 13 practical steps for the systematic and progressive efforts to implement Article VI of the Treaty and the 2010 action plan on nuclear disarmament renewed hopes, at least during the 2000 and 2010 Review Conferences, about the implementation of the obligations under article VI of the Treaty. Nevertheless, lack of substantive progress in their implementation so far, as proved by the assessments made on the implementation status of the 13 practical steps and the 2010 action plan on nuclear disarmament has regrettably deepened the already existing frustration of the non-nuclear-weapon States about the lack of political will on behalf of the nuclear-weapon States for fulfilling their legal obligations under article VI of the Treaty and their unequivocal undertaking to accomplish the total elimination of their nuclear arsenals leading to nuclear disarmament. The fact that even the
most optimistic assessments do not confirm that even one action out of 22 actions of the 2010 action plan on nuclear disarmament is completely implemented, illustrates a very uncertain and unpromising future unless concrete decisions is made, during the 2015 Review Conference, to rectify this trend.

h) The establishment of nuclear-weapon-free zones in different parts of the world is an achievement the contribution of which to the international peace and security should not be underestimated. However, they are incomplete unless and until the establishment of a nuclear-weapon-free world. They contribute to the larger objective of nuclear disarmament, but are not a substitute for the total elimination of nuclear weapons worldwide. Other challenges in regard to such zones are, inter alia, the abstention of certain nuclear-weapon States from granting full, effective, non-discriminatory, unconditional and irrevocable legally binding security assurances to all the parties to treaties establishing these zones against the threat or use of nuclear weapons under all circumstances, as well as the absence of political will by certain non-parties to the non-proliferation Treaty in support of the establishment of such zones in other parts of the world. In this context, the refusal of the Israeli regime to participate in the implementation of the resolutions and decisions on the establishment of a nuclear-weapon-free zone in the Middle East is a living example in this context.

i) Despite the recent release, by certain nuclear-weapon States, of some information on their nuclear weapon arsenals, excessive secrecy prevents the
public from knowing the exact number of nuclear weapons in the world. According to the latest estimates, today there exists more than 17,000 nuclear weapons worldwide. This means, quantitatively, they are nearly 76 percent less than the Cold War peak of around 70,000 warheads in the mid-1980s. However, this is only one part of the fact regarding reduction of nuclear weapon. To have a complete and factual assessment about the quantity and quality of existing nuclear weapons worldwide, their danger and reduction efforts, one should also take into account these facts:

1) Most of the reduced warheads have only been moved from operational status to various reserve, inactive, or contingency categories, since concerned agreements, including the Strategic Arms Reduction Treaty, have not only failed to require the destruction of warheads, but have also ignored both non-strategic and non-deployed warheads, and thus, most of more than 125,000 nuclear warheads that have been built since 1945, continue to exist and actually have not been dismantled. Nuclear disarmament, definitely is beyond mere decommissioning of nuclear weapons or reducing their number while preserving even the higher destructive power. Therefore, the principle of irreversibility, as agreed in the successive Review Conferences of the Treaty, has not been applied to such reductions. At the same time, reduction of nuclear weapons, however positive it may be, is not a substitute for their total elimination;
II) The yield of nuclear weapons has been increased from kilotons to megatons - through replacing of Atomic bombs (A-bombs) with Hydrogen bombs (H-bombs) which are thousands of times more destructive than them – as a result of which most of the existing nuclear weapons would explode with a force roughly 8 to 100 times larger than the bombs dropped on Hiroshima and Nagasaki. So, it is hardly acceptable to argue that, qualitatively, the destructive power of current nuclear weapons are less than that of the Cold War era;

III) Despite reduction efforts by certain nuclear-weapon States, regrettably, all nuclear-weapon possessors continue to modernize or upgrade their nuclear weapon arsenals, and certain nuclear-weapon States have plans to develop new types of such weapons;

IV) In spite of clear commitments of the nuclear-weapon States, according to the latest information released, the role of nuclear weapons in their military concepts and doctrines is not diminished and remains integral part of such doctrines. It is estimated that more than 2,200 of existing nuclear warheads are on alert, ready for use in minutes or hours, which is indicative of the continued existence of the risk of their accidental use and nuclear-weapon mishaps;

V) Development of new types of tactical nuclear weapons reduces the threshold for their use and increases the possibility and risk of their use.
While certain nuclear-weapon States committed, in the framework of 13 practical steps, to “the further reduction of non-strategic nuclear weapons, based on unilateral initiatives and as an integral part of the nuclear arms reduction and disarmament process” and reaffirmed this commitment in the 2010 action plan on nuclear disarmament, unfortunately, there is no tangible progress in the implementation of such commitments.

j) Contrary to the explicit obligations under articles I and II of the Treaty, nuclear-weapon-sharing between the nuclear-weapon States themselves or between them and non-nuclear-weapon States parties to the Treaty continues to exist, the living example of which are nuclear-weapon-sharing within a certain military alliance as well as the so-called nuclear-weapon umbrella. Such practices, by actual proliferation of nuclear weapons, including through their deployment in the territory of some non-nuclear-weapon States parties to the Treaty, seriously undermine the object and purpose of this Treaty and challenge its effectiveness and credibility. Regrettably, such unjustifiable practices are undertaken by those parties to the Treaty who pretend to be the most advocates of non-proliferation of nuclear weapons.

k) While the commitment of the non-nuclear-weapon States under the Treaty in preventing the diversion of nuclear material from peaceful uses is effectively verifiable through the implementation of the concerned safeguards agreement, the lack of any international mechanism to effectively verify the implementation
of unilateral, bilateral and multilateral declarations made or agreements reached regarding the fulfilment of nuclear disarmament obligations in order to assure the international community of States of the real reduction of nuclear weapons and their elimination, remains an essential challenge in regard to nuclear disarmament that needs to be addressed by the Review Conference.

I) Moreover, the abrogation of the Anti-Ballistic Missile Treaty – which was called, by the 2000 Review Conference, “a cornerstone of strategic stability and as a basis for further reductions of strategic offensive weapons”, and hence its “preserving and strengthening” was requested in the context of the 13 practical steps - and the acts of some nuclear-weapon States in deploying global missile defence systems in other countries are of provocative and destabilizing nature. These are among the setbacks to the implementation of the agreements of the 2000 Review Conference.

m) At the same time, taking into account the serious security threat that the existence of thousands of nuclear weapons continues to pose to the very survival of humankind, and the fact that as long as such weapons exist, the risk of their possible use or threat of use persists, and thus, the total elimination is the only absolute guarantee against their use or threat of use, there is a need, pending the realization of this objective and as an interim measure only, to grant to all non-nuclear-weapon States, effective, universal, unconditional, non-discriminatory and irrevocable legally binding security assurances against the use or threat of use of nuclear weapons under all circumstances. Nevertheless,
as current frameworks to provide such assurances are very limited, conditional, insufficient, and above all, can justify the use of such weapons by resorting to such concepts as “defending the vital interests” of a nuclear-weapon State or its “allies and partners”, lack of progress in this field is another challenge that intensifies the frustration of non-nuclear-weapon States in regard to the issues related to nuclear disarmament.

n) Above all, in our view, the main challenge of nuclear disarmament is the lack of genuine political will by the nuclear-weapon States to fulfil their legal obligations under article VI of the Treaty and implement their unequivocal undertakings to accomplish the total elimination of their nuclear arsenals. A fair and realistic assessment of the actual results of policies, efforts, decisions, initiatives and other measures, on nuclear disarmament, at the unilateral, bilateral, regional, and international levels, indicates that, in the absence of a strong genuine political will by the nuclear-weapon States, even the adoption of the most practical decisions, action plans, and above all, having in place a universal legally binding instrument, will not lead the international community of States to a nuclear-weapon-free world. Current lack of genuine political will by the nuclear-weapon States, definitely will add to already existing frustration of the non-nuclear-weapon States. However, this will not be the only impact of the lack of political will. The persistence of this situation, with no doubt, will gradually erode the validity and credibility of the Treaty, lessen its effectiveness
and negatively impact the international peace and security, which certainly is not in the common interest of the present and future generations.

III) Nuclear Disarmament: Necessity of Generating a Strong Genuine Political Will to Fulfil Obligations and Commitments

18. Achieving nuclear disarmament as the fundamental objective of the non-proliferation Treaty is of essential importance. Taking into account the current implementation status of the obligations on nuclear disarmament under the Treaty and final documents and action plans of its Review Conferences, and also in line with action 5 (g) of the 2010 action plan on nuclear disarmament, through which the Conference has decided to consider, during the 2015 Review Conference, “the next steps for the full implementation of article VI”, the Review conference is highly expected, by building upon the existing momentum on nuclear disarmament, created, inter alia, by the first ever high-level meeting of the General Assembly on nuclear disarmament, on 26 September 2013, and the three conferences on the humanitarian impact of nuclear weapons, in 2013 and 2014, to take concrete actions to rectify the current status of implementation of the obligations and commitments on nuclear disarmament, so as to stop the ever-deepening frustration of the non-nuclear-weapon States, prevent the continuous erosion of the Treaty’s credibility, and end the situations undermining the effectiveness of this important instrument. To this end, the Islamic Republic of Iran proposes the following elements for their incorporation into the nuclear disarmament section of the final document of the 2015 Review Conference:
\textit{Reaffirming} that taking all necessary practical measures for the total elimination of all nuclear weapons worldwide, including to pursue in good faith and bring to a conclusion negotiations leading to nuclear disarmament in all its aspects under strict and effective international control, is a legal obligation to which all States Parties are committed under Article VI of the Treaty;

\textit{Acknowledging} the strong support expressed at the first ever high-level meeting of the United Nations General Assembly on nuclear disarmament, on 26 September 2013, for taking urgent and effective measures to achieve the total elimination of nuclear weapons, and the urgent compliance with the legal obligations and the fulfilment of the commitments undertaken on nuclear disarmament;

\textit{Expressing deep disappointment} over the lack of tangible progress so far in the implementation of the obligations under article VI of the Treaty and the unequivocal commitments under the 13 practical steps for the systematic and progressive efforts to implement Article VI of the Treaty and the 2010 action plan on nuclear disarmament, and \textit{confirming} the continued validity of all such obligations and commitments until all their objectives are achieved;

\textit{Underscoring} that the lack of practical progress on the fulfilment of obligations under article VI of the Treaty and the unequivocal commitments under the 13 practical steps for the systematic and progressive efforts to implement Article VI of the Treaty and the 2010 action plan on nuclear disarmament cannot continue
indefinitely, and therefore their implementation should be time bound, defined by taking into account the long delay in the implementation of such obligations and commitments and the urgent need for their full and immediate fulfilment;

Confirming that all States parties undertake to urgently commence the negotiations, in the Conference on Disarmament, for the early conclusion of a comprehensive convention on nuclear weapons to prohibit their possession, development, production, acquisition, testing, stockpiling, transfer, use or threat of use and to provide for their destruction as called for by the United Nations General Assembly resolutions 68/32 and 69/38;

Acknowledging the momentum on nuclear disarmament, created, inter alia, by the first ever high-level meeting of the United Nations General Assembly on nuclear disarmament, on 26 September 2013, and the three conferences on the humanitarian impact of nuclear weapons, in 2013 and 2014, and calling for more broad and active participation of States parties in the annual meetings of the General Assembly on the occasion of the International Day for the Total Elimination of Nuclear Weapons and the upcoming conferences on the humanitarian impact of nuclear weapons;

Reaffirming that “the United Nations high-level international conference on nuclear disarmament” in 2018, the convening of which has been decided by the United Nations General Assembly in its resolution 68/32, provides the international community of States with a valuable opportunity to review the
progress made in nuclear disarmament and make concrete decisions to advance the objective of a nuclear-weapon-free world, and accordingly, urging all States parties to participate actively and at the highest possible level in that high-level international conference;

“Urging the United Nations high-level international conference on nuclear disarmament to consider, as a high priority, the adoption of a deadline for the total elimination of nuclear weapons worldwide;

“Invites the States parties to take additional appropriate measures in further mobilizing the international efforts towards nuclear disarmament, in particular on 26 September of every year as the International Day for the Total Elimination of Nuclear Weapons, including through enhancing public awareness and education about the necessity for the total elimination of nuclear weapons and removing the threat posed to humanity by their continued existence, inter alia, through highlighting the humanitarian impact of nuclear weapons;

“Confirming the commitment of all nuclear-weapon States for taking concrete measures for diminishing and ultimately excluding completely and no later than 2020, the role of nuclear weapons in their military and security doctrines, concepts and policies, so as to ensure that there is no nuclear weapon in operational status;

“Confirming also the commitment of all nuclear-weapon States to cease completely and no later than 2020, all plans aimed at upgrading and refurbishing
their existing nuclear weapon systems and their means of delivery, developing new types of nuclear weapon systems and constructing any new facility for the development, deployment and production of nuclear weapons and their means of delivery at home and abroad;

“Underlining, once again, the importance of applying the principles of transparency, irreversibility and verifiability in all activities of nuclear-weapon States related to the fulfilment of their obligations on nuclear disarmament and the implementation of their unequivocal commitments to accomplish the total elimination of their nuclear arsenals, and decides to consider, in the 2020 Review Conference as a high priority, the establishment of a robust international mechanism for the verification of the fulfilment of nuclear disarmament obligations by the nuclear-weapon States;
